

Toast Flex 22" Stand Kit

Easy Install Guide

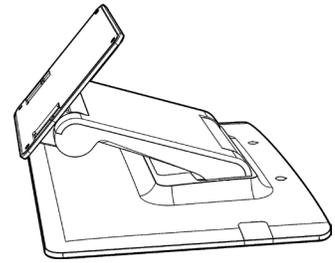

Tools Needed

4x Thumbscrews
found in the general toolkit

i Pro tip: Clear your install area of any obstructions before you get started.

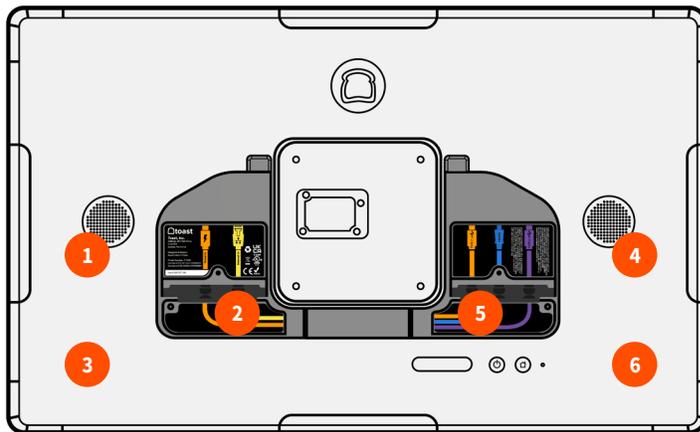

What's in the box

1x Stand

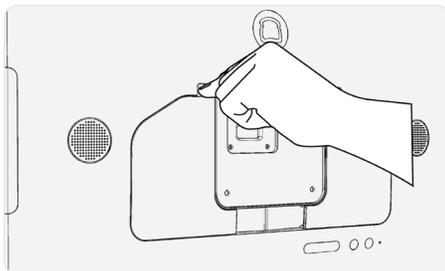

Step 1

Connect to power and ethernet according to the labels on the back of your Toast Flex 22" terminal.

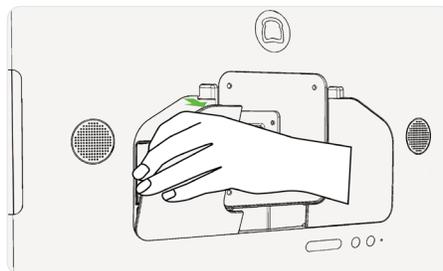

1. Power & ethernet cables
2. Grommet to seal the pocket
3. Pocket for cable management
4. Accessory pocket
5. Grommet to set the cable
6. Pocket for cable management

Remove back panels. Open and remove the back panel from the top cut outs to expose the back pockets

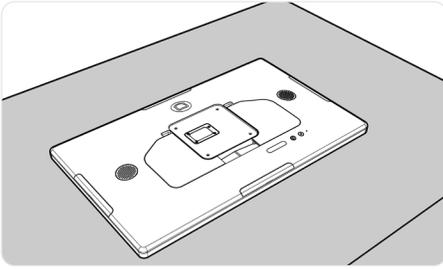

Plug in your cables. Plug in the USB-C power and the (optional) ethernet cable in the left pocket as shown

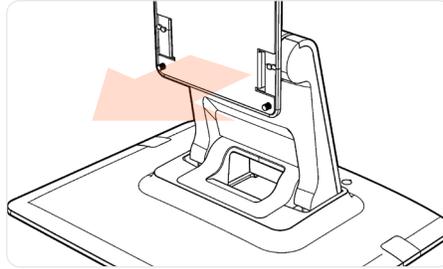

Step 2

Place the display on a flat surface. Ensure the surface is clean and stable.

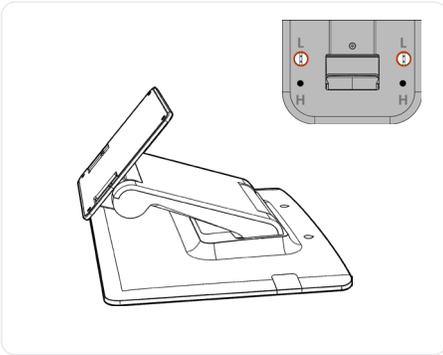

Check the stand direction. Ensure the plate is facing towards the front of the stand.

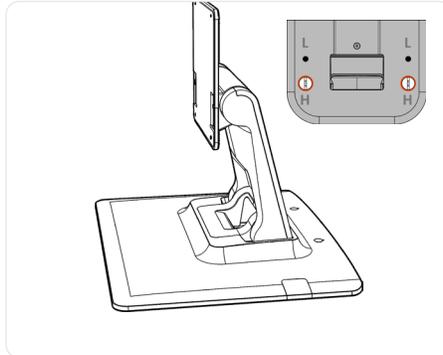

Step 3

Choose your height. The stand can be configured in high or low mode, depending on your comfort. Flip the stand over to find the height options, marked by “H” and “L.”

If you would like to change the height or your stand, unscrew the bottom screws, hinge the stand to the alternate position, and re-secure with the screws.

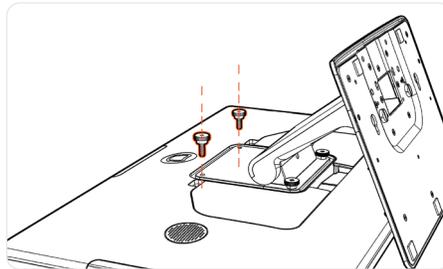

Step 4

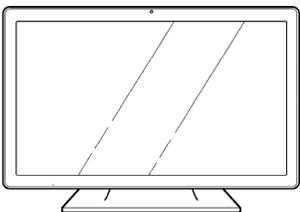

Secure the stand with the thumbscrews. Start with the two screws at the top.

Next, hinge the stand for easier installation of the bottom screws.

Adjust the display angle. Move the top hinge to find the angle that works best for you.
